

AI for Finance, Data Analysis & Reporting

By Kayatthri Krishnasamy

About the Trainer

- Over 17 years of experience in Marketing and Digital Marketing
- Founder of TECH BYTEZ SOLUTION – Digital Media Agency
- Director of Operations Malaysia, BITQUEST SDN BHD
- Trainer for Social Media Marketing, Digital Marketing and AI tools.
- Consultant for SMEs and MNCs Digital Marketing Department.

Kayatthri Krishnasamy

Director of Operations Malaysia, BITQUEST
SDN BHD

Types of Artificial Intelligence

Artificial Intelligence

Simulating human intelligence by machines

Machine Learning

Enables systems to learn from data

Deep Learning

Uses neural networks for complex tasks

Generative AI

Creates new content from learned patterns

The Pioneers of AI

 **Alan Turing (1912 – 1954)**

Before AI had a name
Famous for asking and researching –
Can machine think?

 **John McCarthy (1927- 2011)**

The first to use the term "artificial intelligence"
Designed Machine Intelligence

Machine Learning Explained

- **Learns from data without explicit programming**
- **Creates predictive models based on input data**
- **Outputs depend on quality and training data**

You provide the algorithm with structured data (spreadsheets, reports, customer info).

You also give it guidelines or features to look at.

It learns patterns and helps with predictions.

Understanding Deep Learning

Inspired by Brain

Artificial neural networks mimic brain functions

More Advanced

It can work with messy, unstructured data and doesn't need you to specify rules—it figures them out automatically.

How it works:

DL processes huge amounts of data: documents, images, voice recordings, chat logs.

It builds multiple layers of understanding to detect complex patterns.

Generative Artificial Intelligence

- Generates text, images, media using learned patterns
- Models learn structure from training data
- Creates new content with similar characteristics

What can these Generative AI tools do?

TEXT

AUDIO

VIDEO

Code

Design

Synthetic Data

Before You Start Using Any AI Tool Set Up Your AI for Better Results, Privacy and Productivity

1. Personalise Your AI

- Set your preferred language and writing style
- Choose your preferred tone and response format
- Enable memory or personalisation (if appropriate)
- Add your role and common work tasks

**Understand the
Tool's Capabilities**

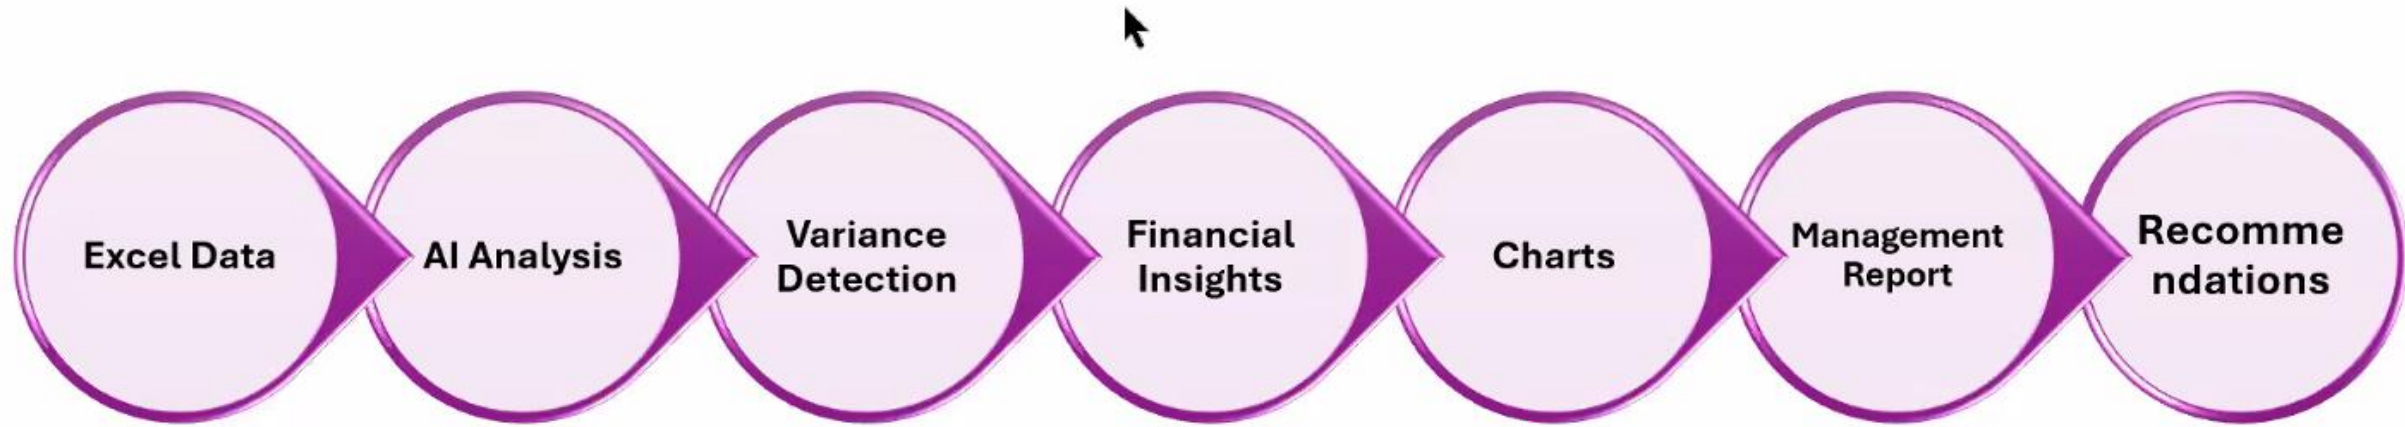

2. Review Data & Privacy Controls

- Review chat history and memory settings
- Check whether your chats are used for model training
- Understand file upload and data retention policies
- Enable multi-factor authentication (MFA) and use strong passwords

Get better output with the BRIEF framework
