Industry 4.0 in Action:
Transforming Manufacturing
with Process Automation

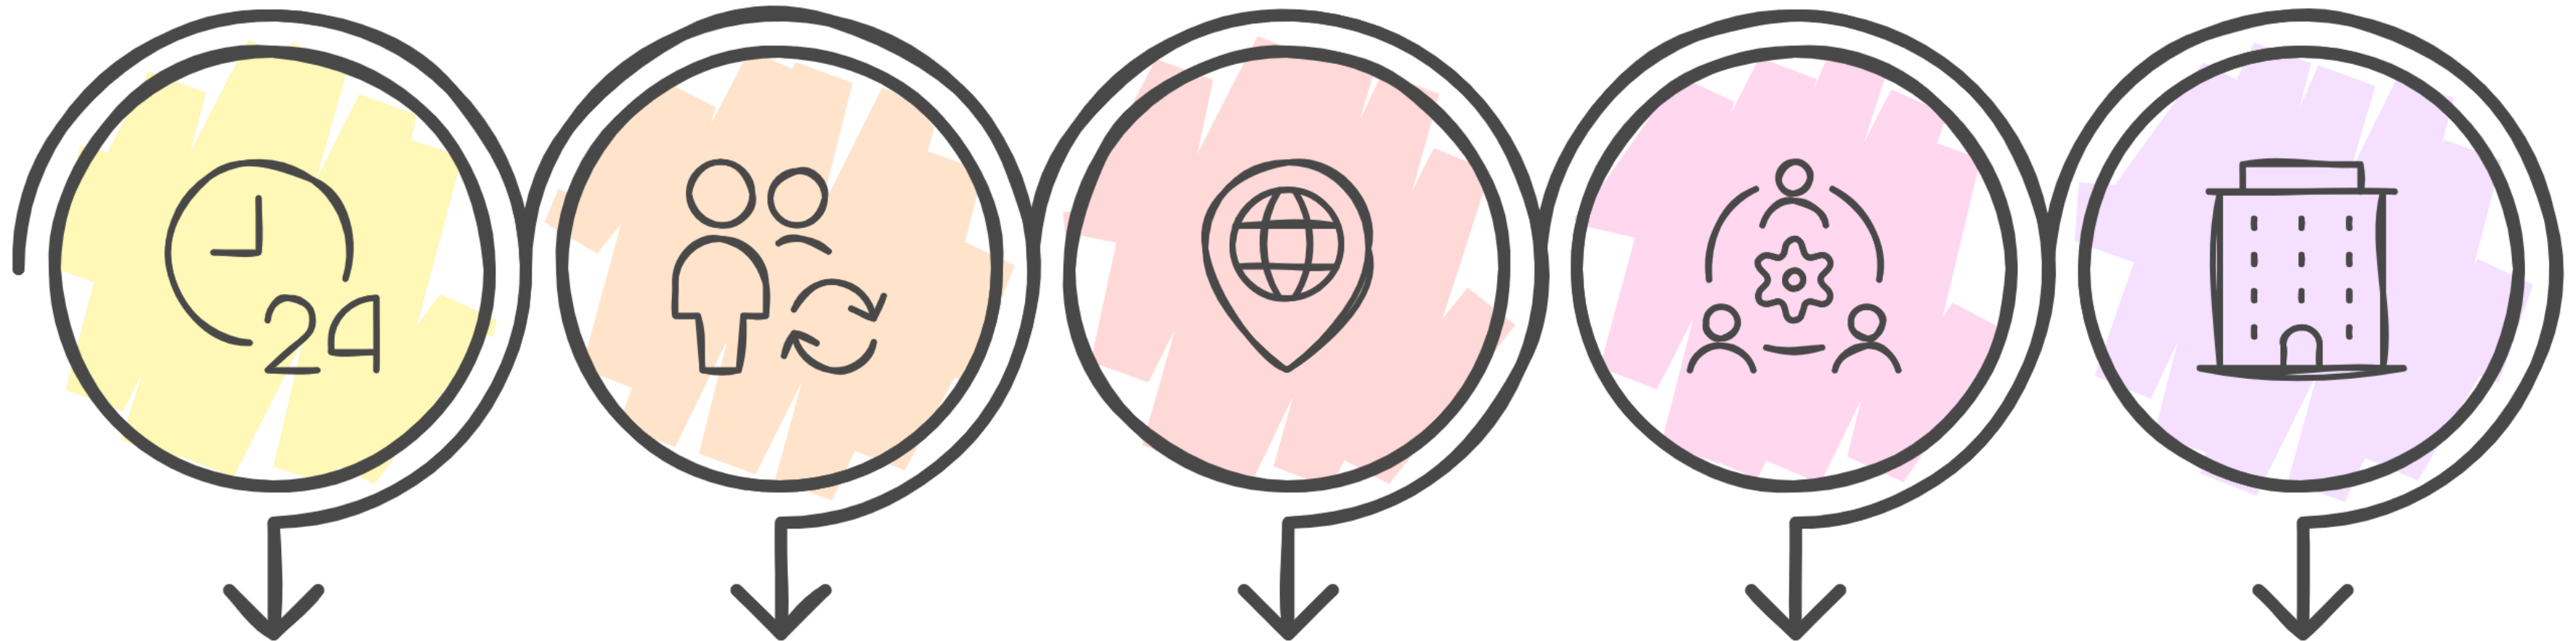

SEPT 2025

Agenda

- ❖ Company Background
- ❖ Manufacturing Challenges & Cost of Inaction
- ❖ Streamlining with K2 Five BPM + Docuflow DMS
- ❖ Q&A Session

InfoConnect

InfoConnect at a Glance

Experience

Over 30 years in
information
management.

Clients

Served over 200
clients since
founding.

Global Presence

Business presence
in 10 countries.

Workforce

More than 80
dedicated
employees.

Physical Offices

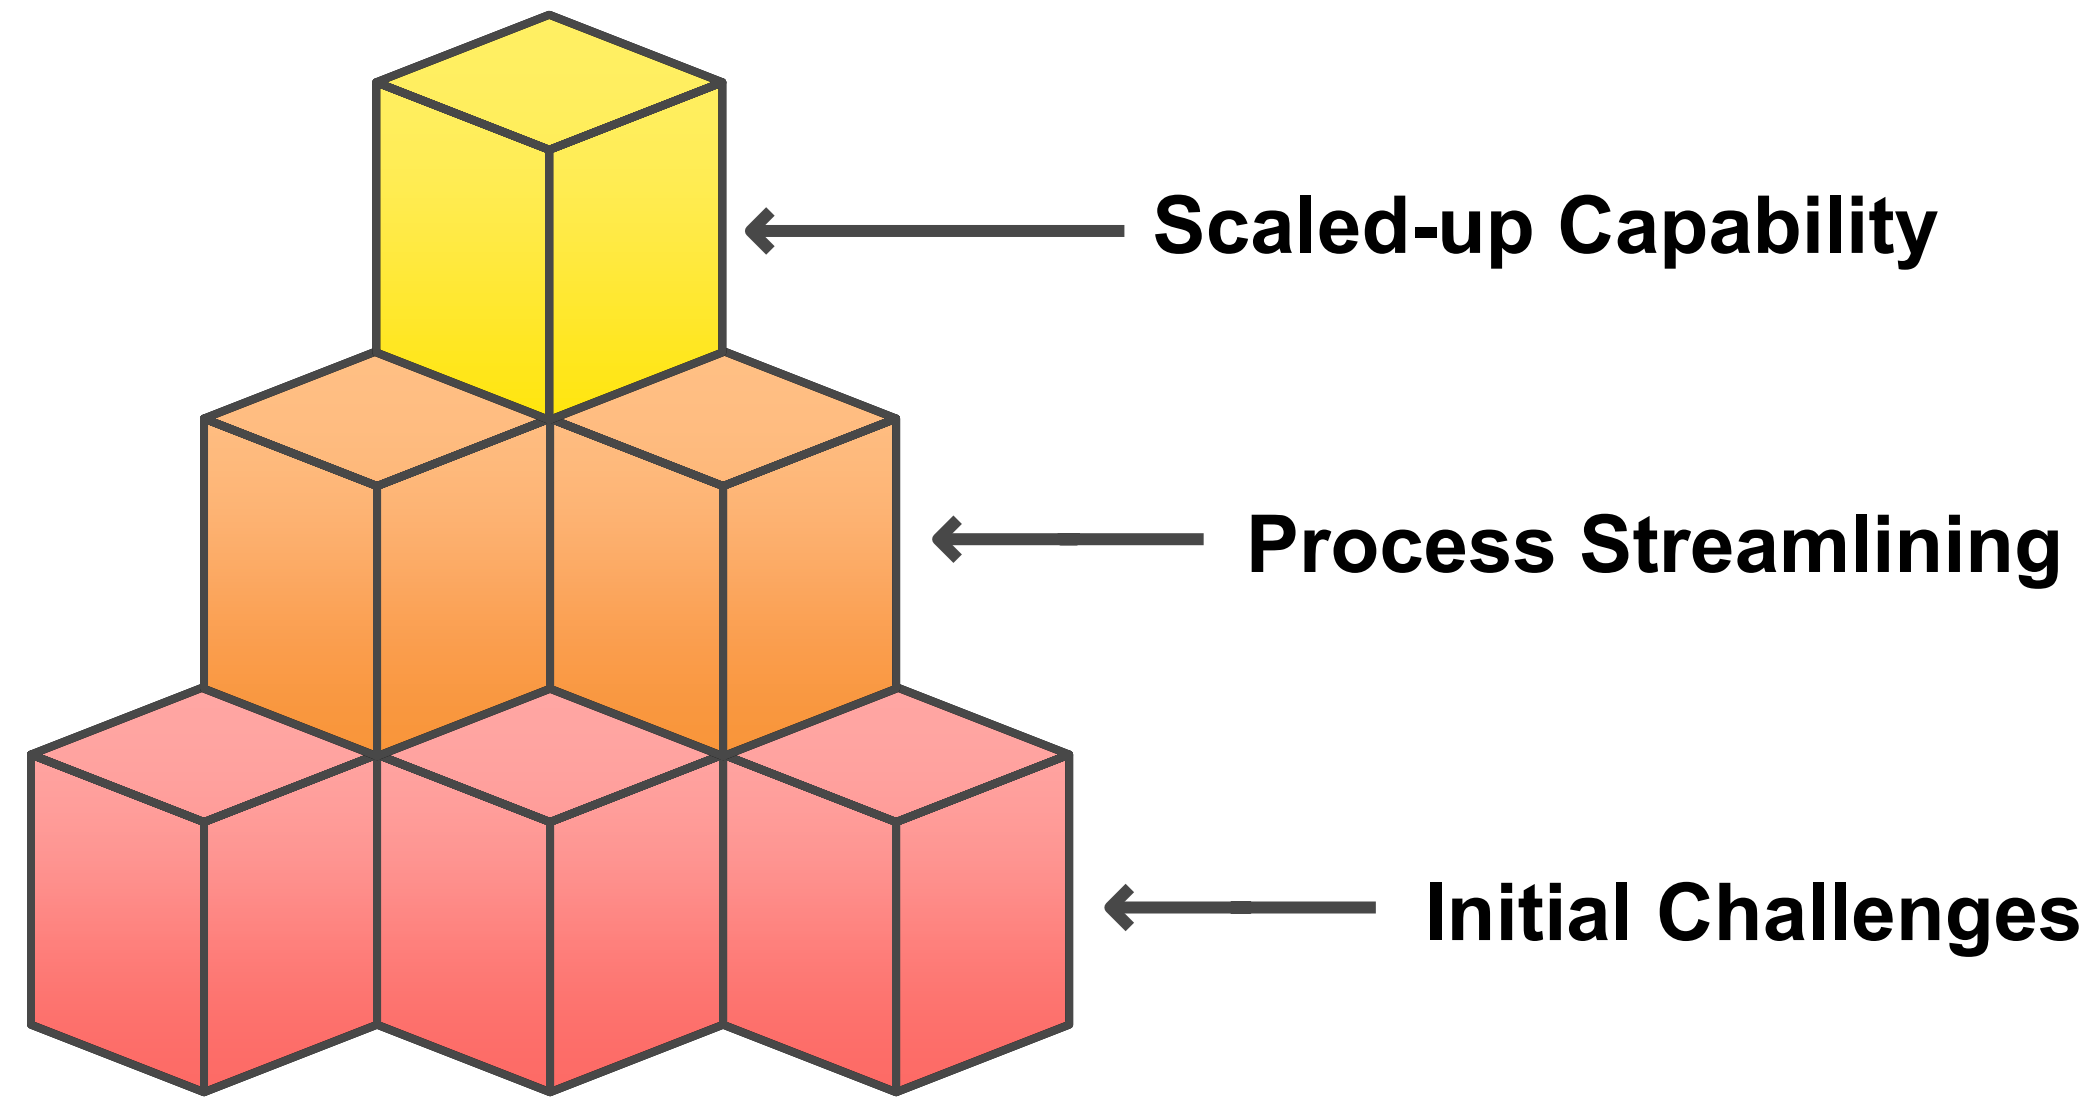

Two offices in
Malaysia and
Indonesia.

Transforming Manufacturing:
From Challenges to Streamlined
Processes

Manufacturing Transformation Pyramid

Process Challenges Faced By Manufacturing Organizations Today

Here Are The Key Findings

Which department within your organization do you see as having broken systems and processes or needing improvements?

22% Operations, shared services

18% Human resources

15% Support

15% IT

11% Sales

9% Finance & accounting

7% Marketing

3% Other

Though critical to manufacturing success, the inventory management process was seen as the most broken.

Which of the following specific processes do you see as being broken or needing improvement within your organization?

15% Inventory management

12% Compliance and regulatory

11% New vendor set-up

10% Customer support

10% Finance and accounting

10% Customer onboarding

10% Contract processing

9% Customer offboarding

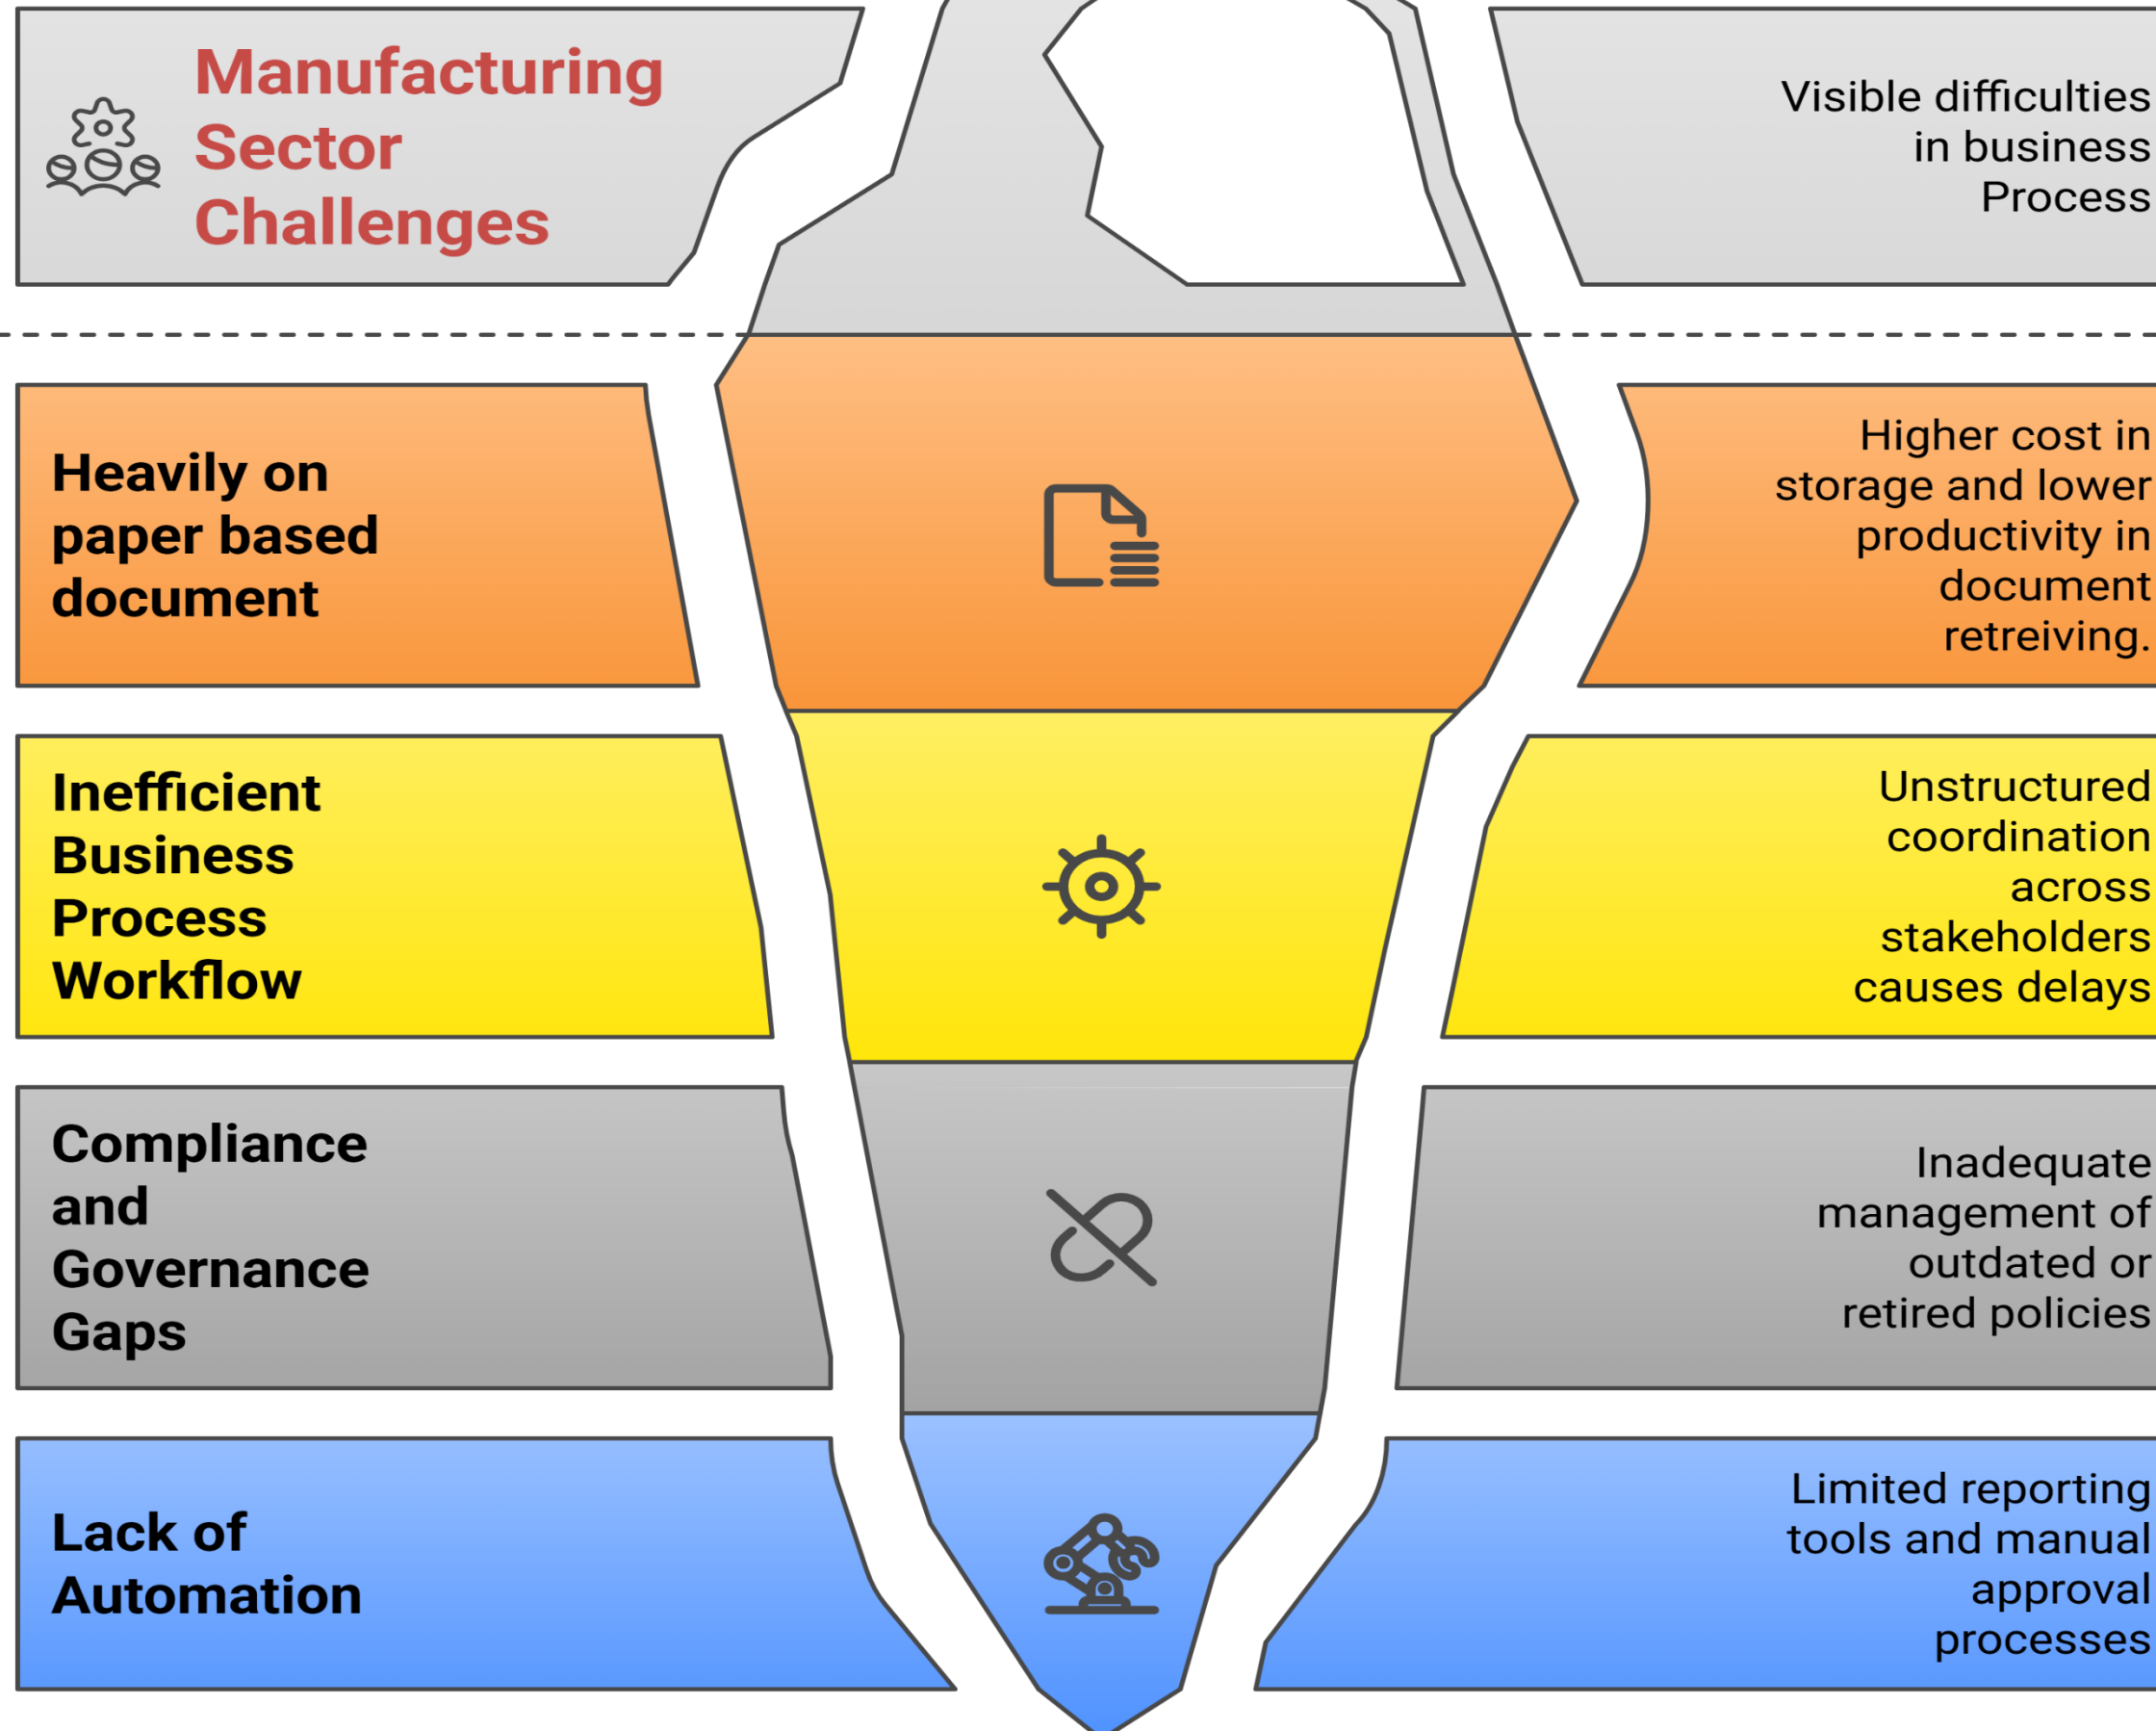

9% Form intake processes

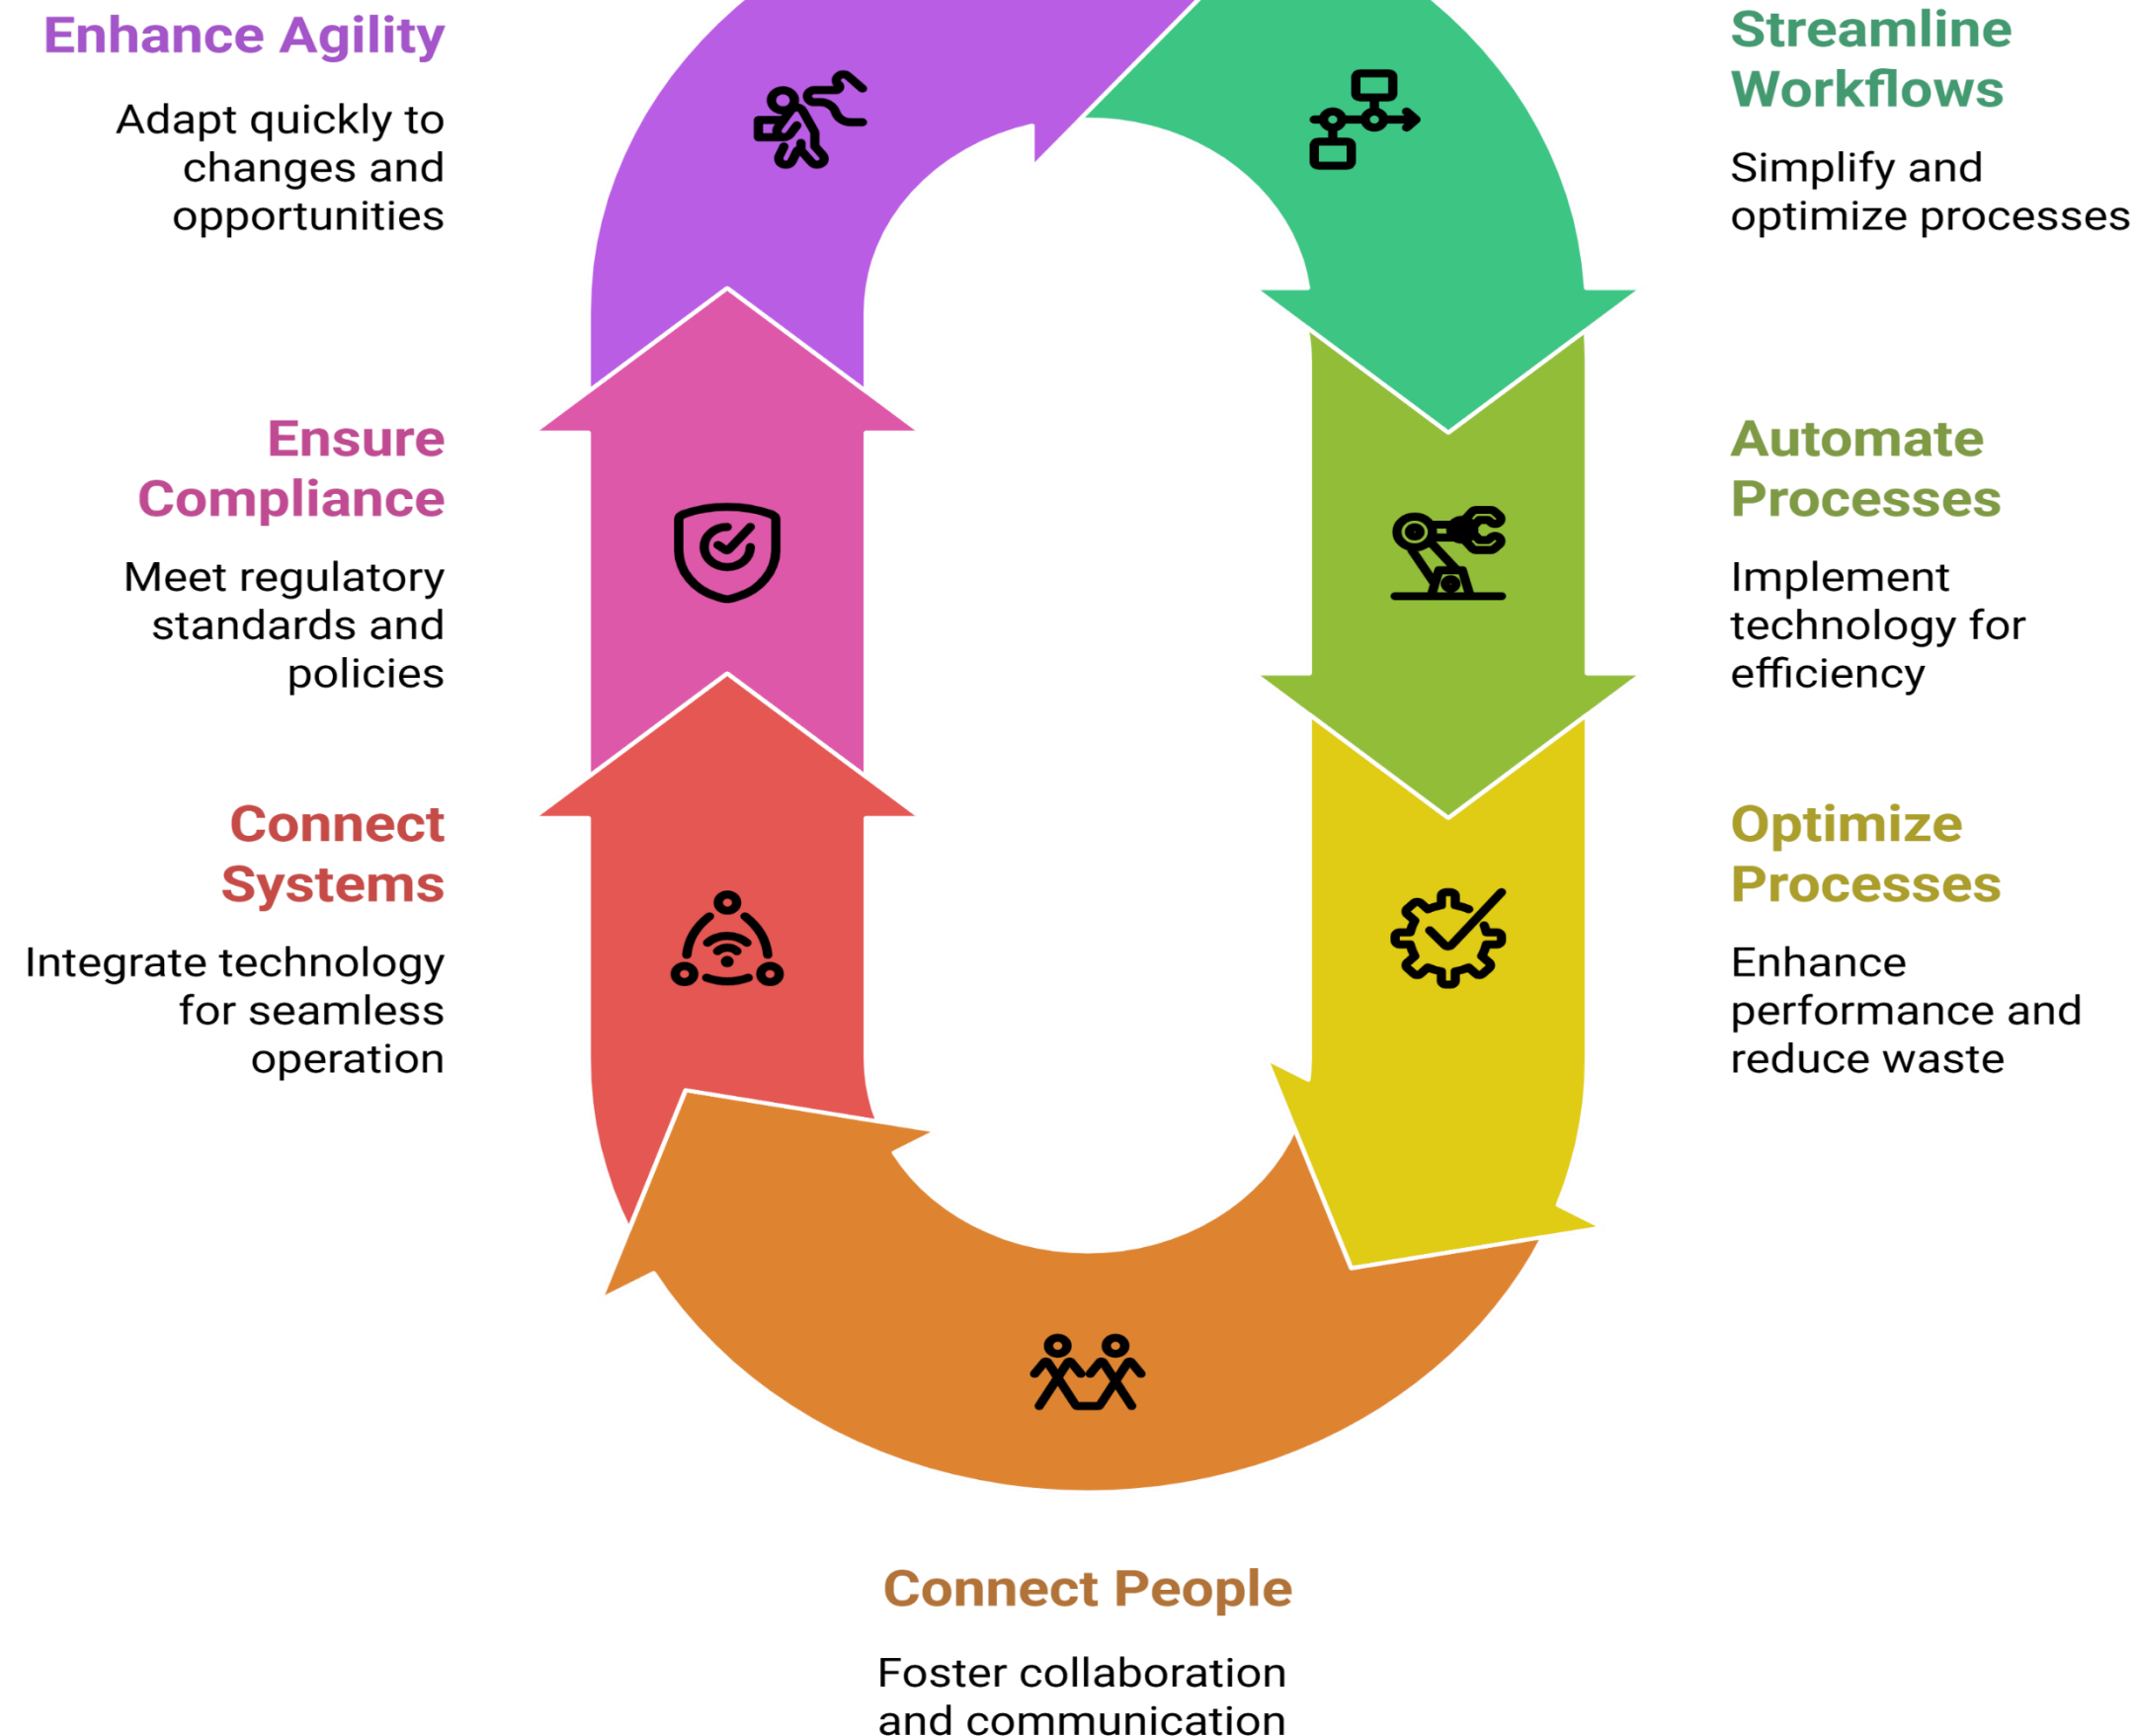

3% Other

Business Process Management (BPM)

Most Common Used Cases by Department

Sales

- > Sales proposal quoting
- > Customer invoicing
- > Deal desk price and legal approvals.

Finance

- > Invoice generation & collection
- > Vendor onboarding & validation
- > CapEx request & approval routing.

Operation

- > Production Planning & Scheduling Enrollment processes
- > Inventory & Materials Management
- > Logistics & Shipment.

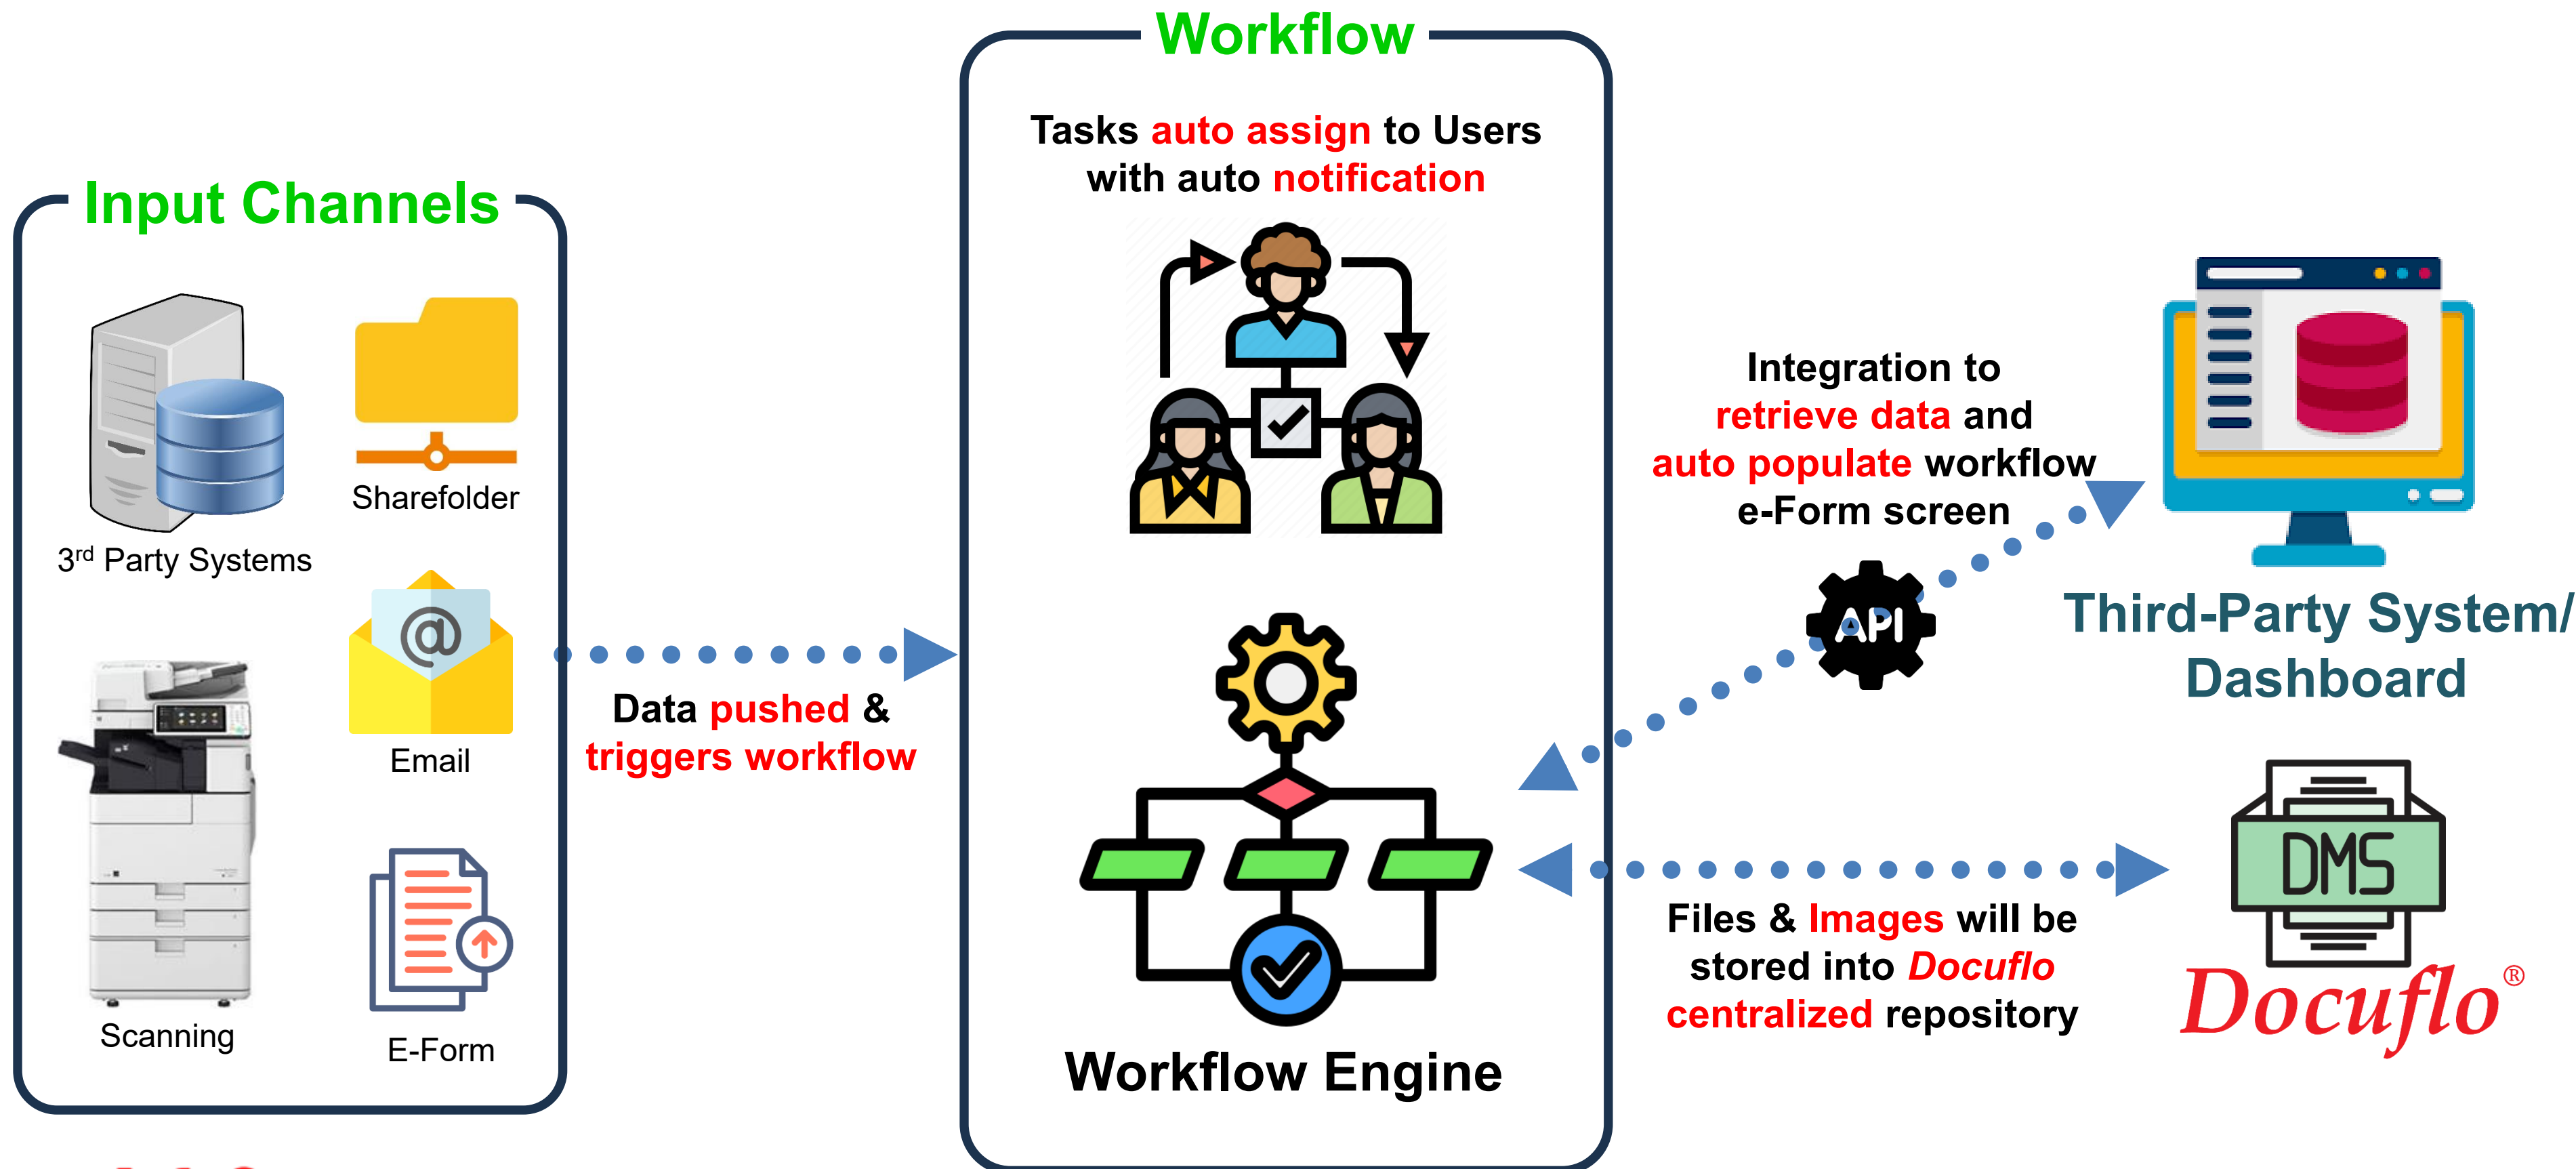

Legal

- > New contract intake & review
- > Compliance & audit documentation
- > Self-service NDA and legal contracts.

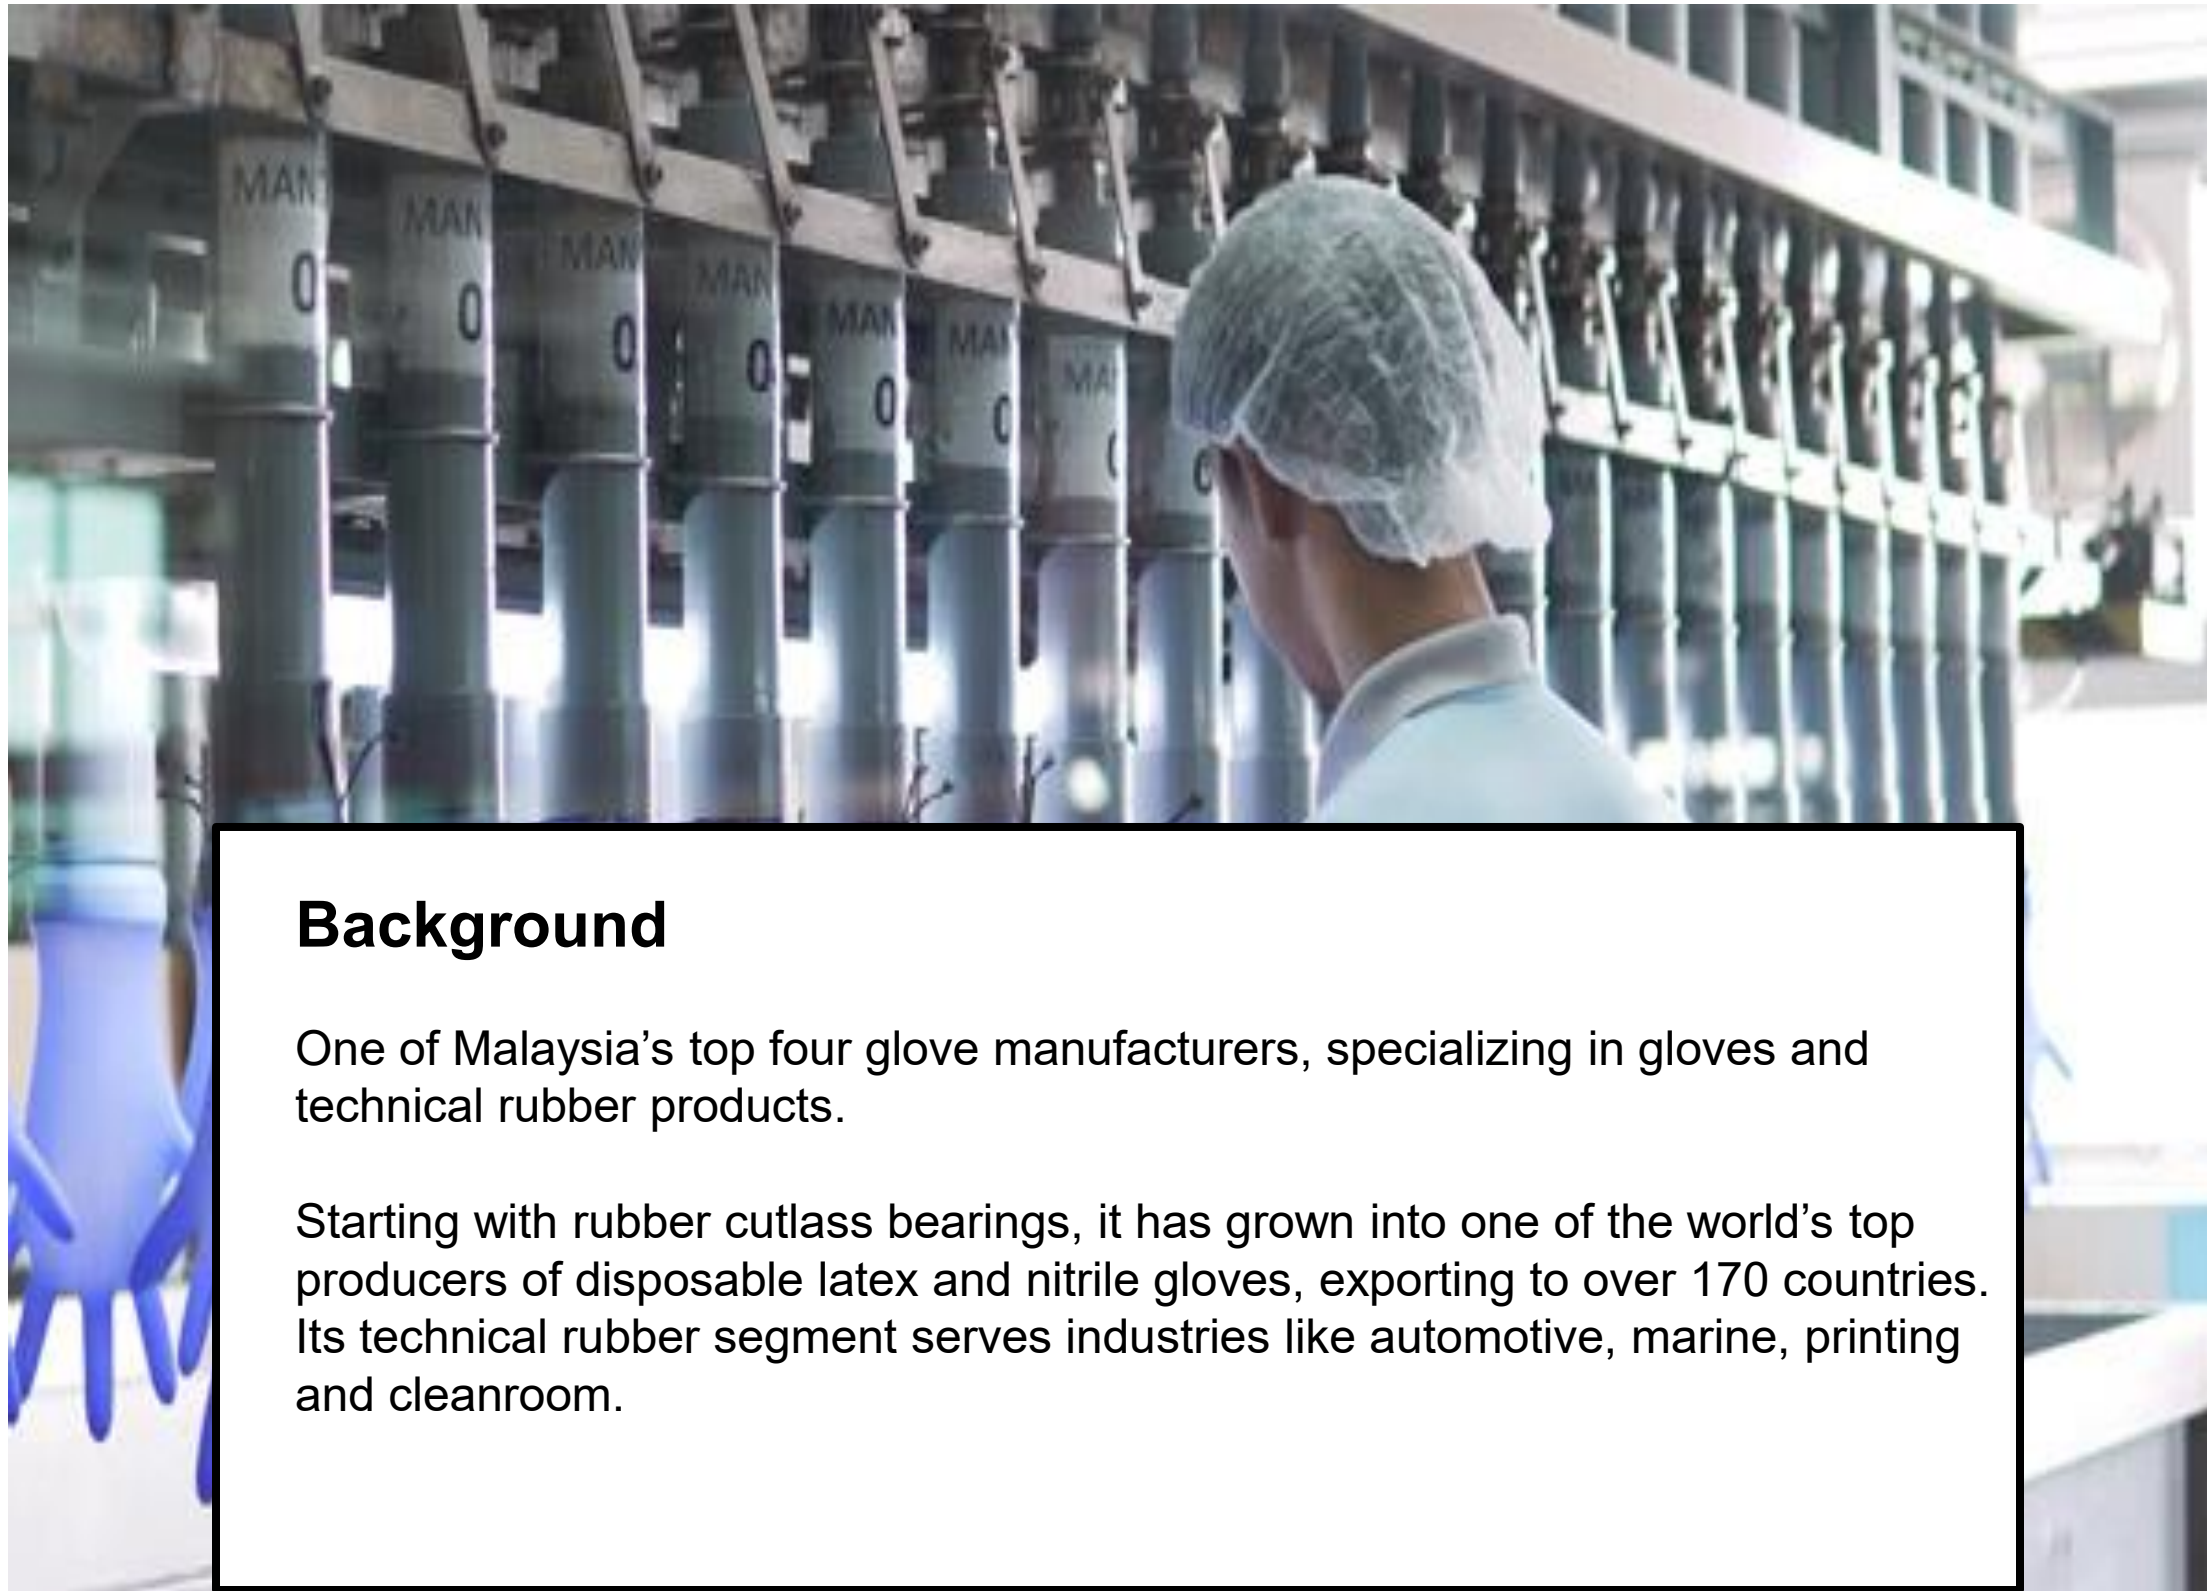

IT

- > Help desk ticket resolution
- > New equipment or service requests
- > incident management.

Solution Overview

Case Study – Glove Manufacturing

Background

One of Malaysia's top four glove manufacturers, specializing in gloves and technical rubber products.

Starting with rubber cutlass bearings, it has grown into one of the world's top producers of disposable latex and nitrile gloves, exporting to over 170 countries. Its technical rubber segment serves industries like automotive, marine, printing and cleanroom.

Opportunity

- Manual, Time-Consuming Processes – Audit planning, validation, and reporting were slow and resource-heavy.
- High Risk of Errors – Manual handling led to mistakes, inconsistencies, and missed details.
- Lack of Traceability – Difficult to track responsibilities, approvals, and audit progress across stakeholders.
- Process Delays – Bottlenecks and inefficiencies increased turnaround time for reviews and NC reporting.

Benefits

BPM

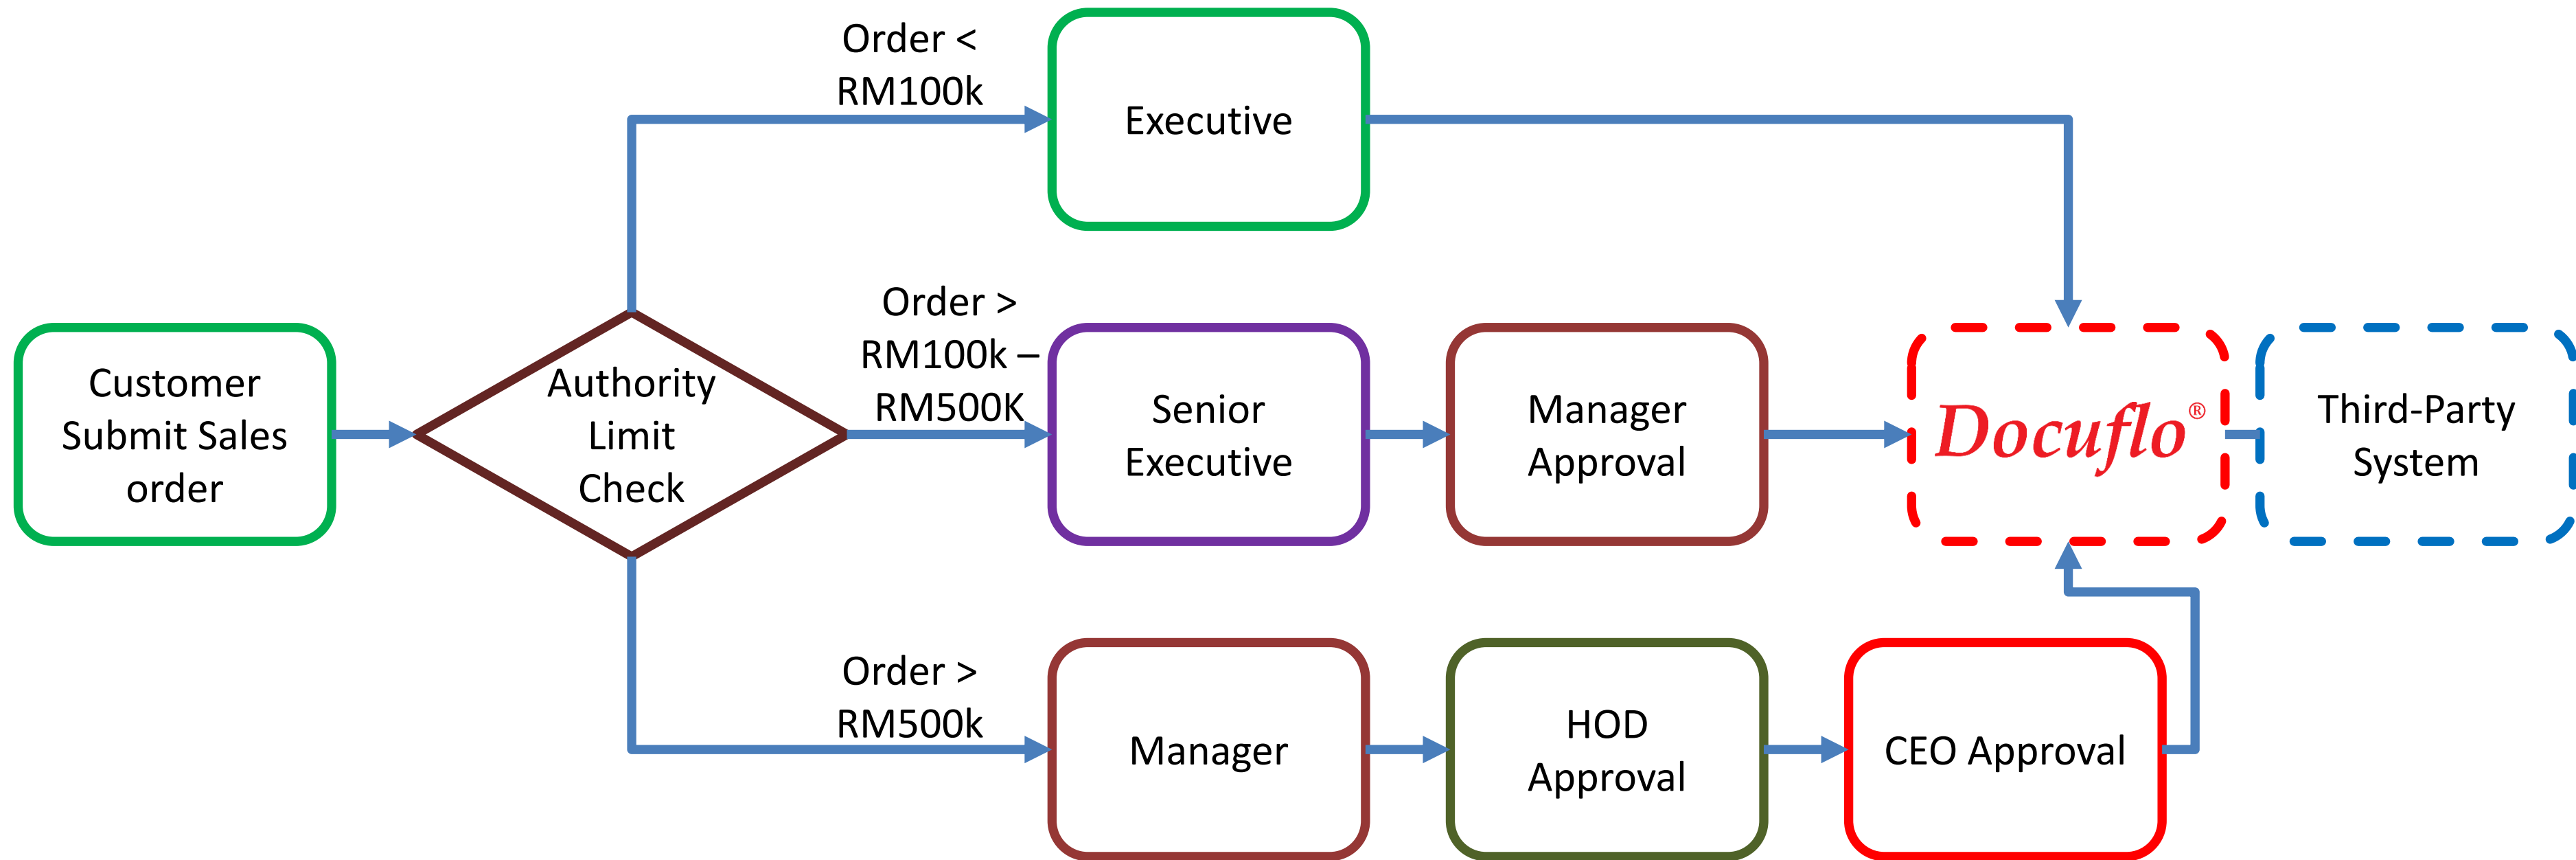

Automating internal audits workflow process to reduce errors, save time, and enhance compliance.

Docuflow DMS provides fast retrieval of documents via integration with workflow system while serve as a central repository.

What are the Key Elements of Success?

Eliminate repetitive office tasks and redeploy staff to planning, logistics, & supplier coordination

Accelerate product launch cycles to boost revenue and market responsiveness

Improve sales and order efficiency to drive growth without added cost

Enhance customer or distributor experience to strengthen loyalty and satisfaction

Ensure OSHA and ISO compliance with automated reporting and documentation

Where Do You Start?

1

Inventory and map your existing workflows / processes

A rough “process map” is better than nothing. Document steps, actors, decision points, inputs/outputs.

2

Gather internal inputs: pain points, feedback, and complaints

- Identify manual or paper-based processes for quick ROI.
- Look for processes that cross multiple systems or require repeated manual handoffs.

3

Apply screening criteria / prioritization filters

Use scoring to find high-value, feasible candidates.

- Workflow usage frequency
- Time spent or cost incurred per instance
- Complexity / dependencies
- Stakeholder buy-in
- Risk or compliance exposure
- Measurability

4

Run lightweight proofs / pilots

Start with small automations to show value quickly and use these to validate assumptions and get internal momentum.

5

Leverage analytics & continuous improvement

Continuously refine the automated workflow, then expand further. Always tie back to business KPIs to show ROI and maintain governance.
