Masterclass Series

Responsible AI, Governance and Security best practices (27 & 28 August 2026)

Low-code Workflow Automation & Agents (20 & 21 August 2026)

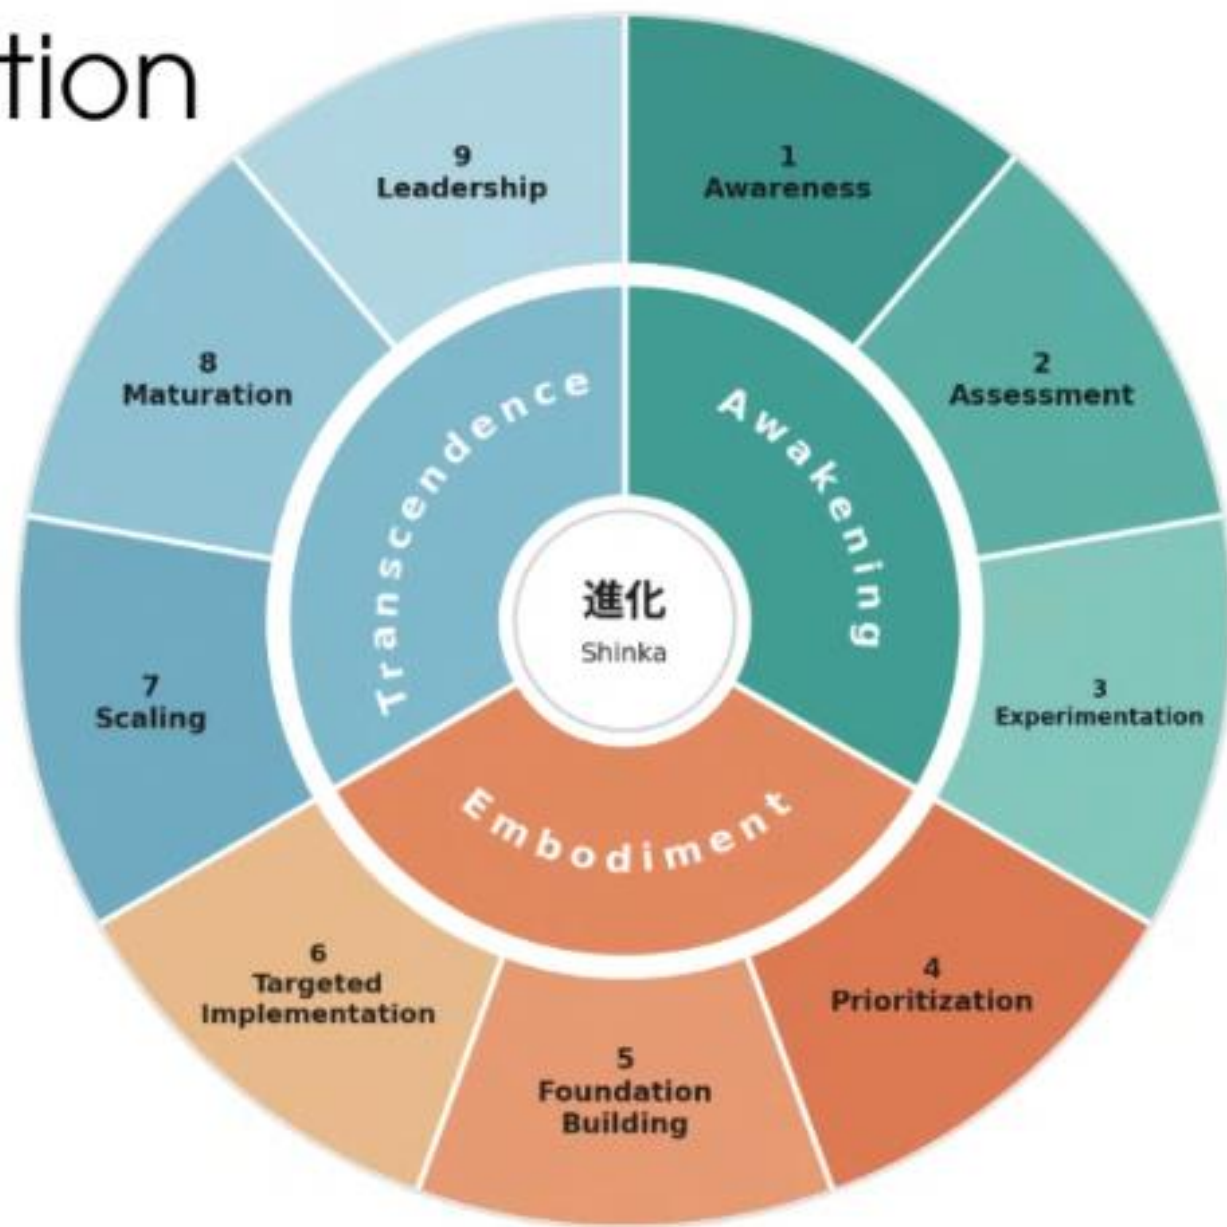

AI-Powered Financial Analysis & Toolings (13 & 14 August 2026)

Our AI Transformation Philosophy

μPledge

In Japanese, *Shinka* means evolution – not just change, but a purposeful, irreversible progression to a higher state. It implies that true transformation is not a single event, but a continuous, stage-by-stage journey.

Automation vs AI

History of Automation: The Excel Era

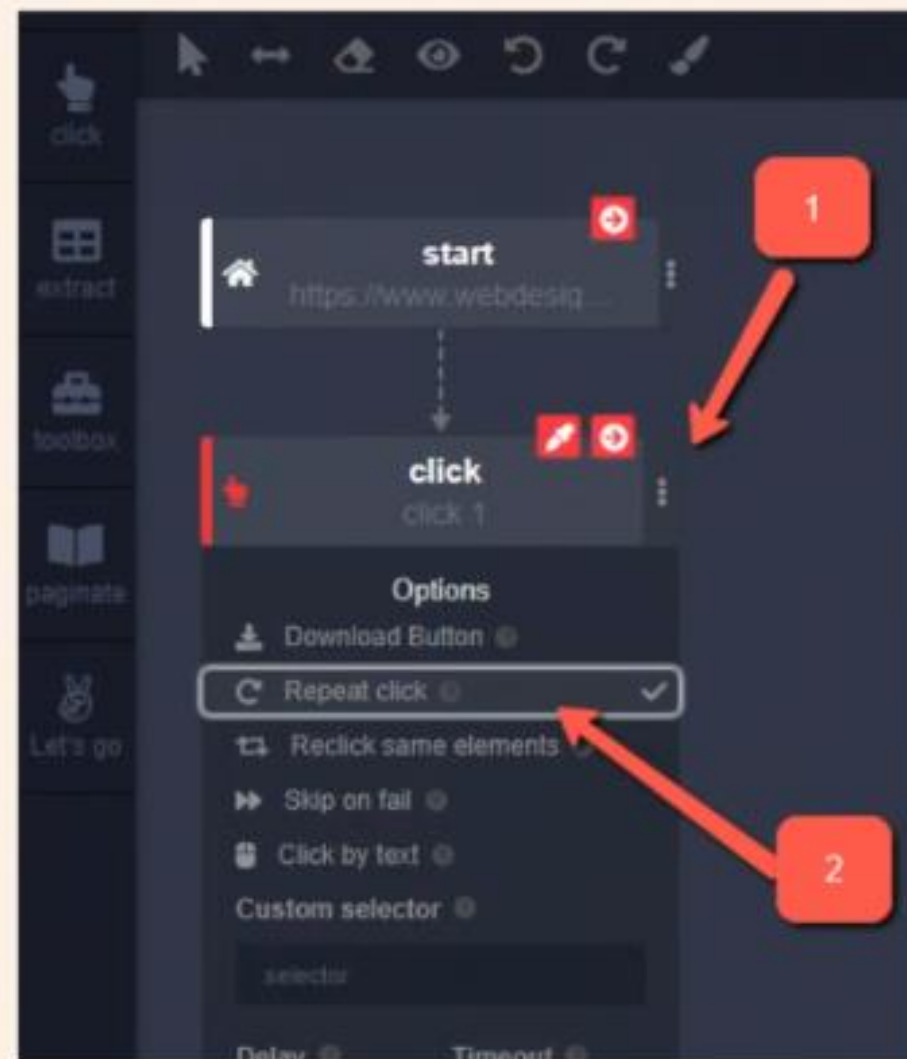

Limitations: Fragile, local, hard to audit.
the infamous "Final_final_v3_Actual.xlsx" problem

Macros and VBA: The first wave of citizen development.

History of Automation: The RPA Era

In this initial phase, task automation focuses on basic keystrokes and clicks. While it provides efficiency, this rules-based approach is often brittle and fails when user interfaces change unexpectedly.

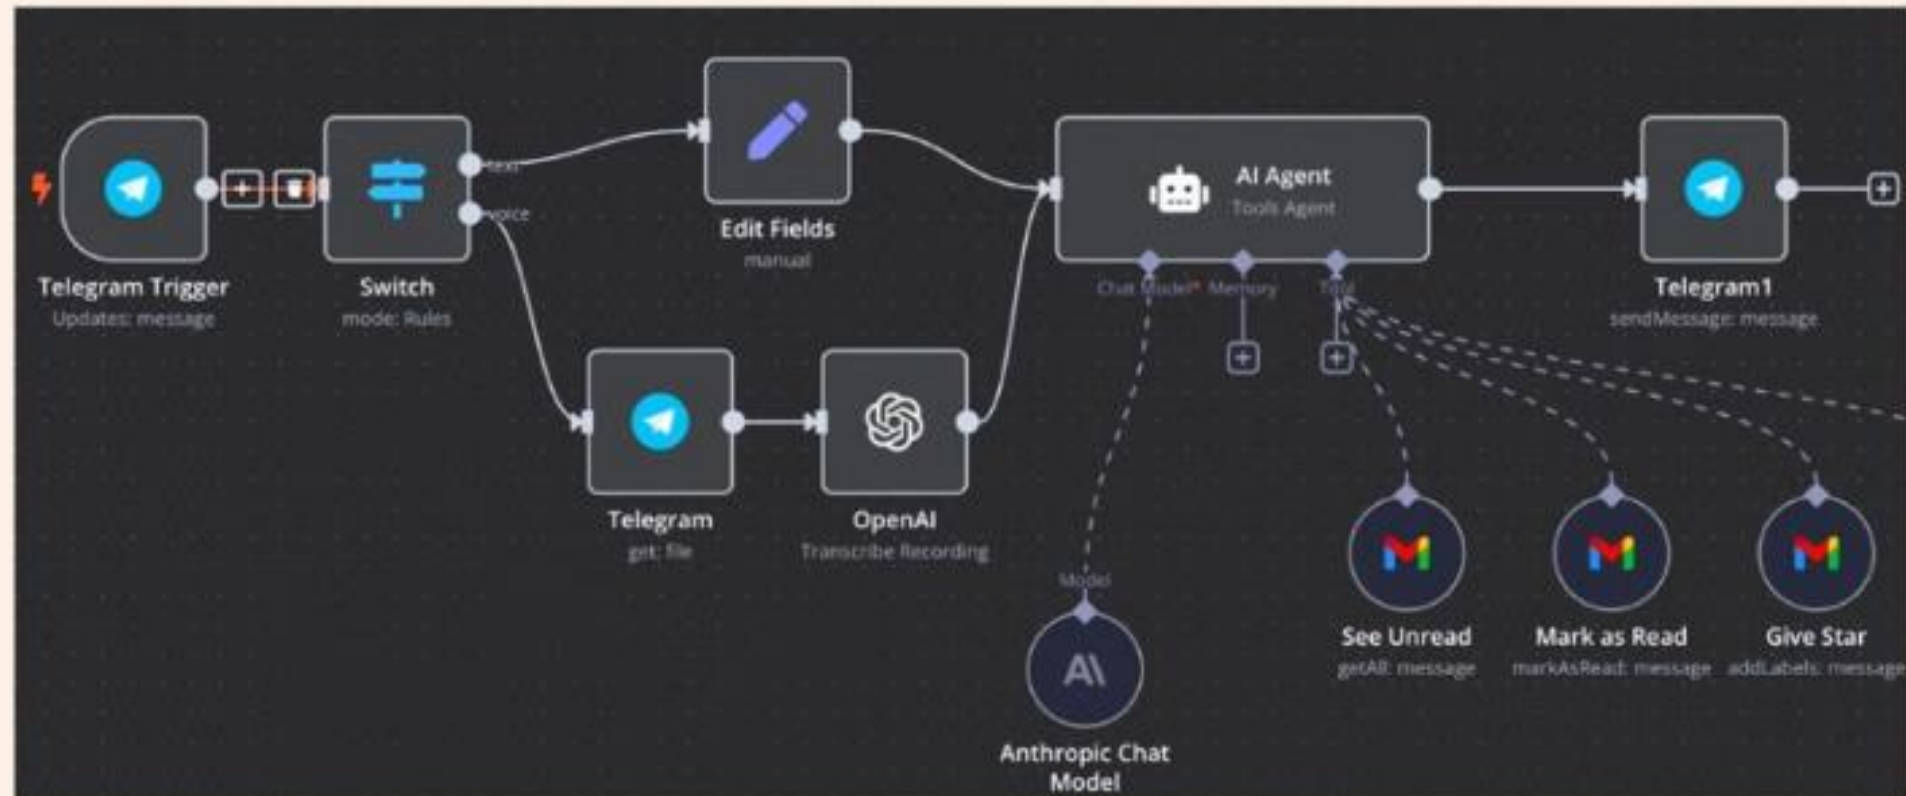

Present: The No-Code Revolution

The rise of workflow automation empowers citizen developers to create solutions independently, enabling systems to communicate via APIs. This shift allows data to flow seamlessly, enhancing efficiency across finance operations.

Present: Era of AI Agents

AI agents represent the future of finance automation, utilizing autonomous reasoning to enhance decision-making, optimize processes, and provide real-time insights, creating a dynamic and responsive financial environment.
