

INTRODUCTION TO

Leading AI-Enabled Teams

Four steps for leading a team where people and AI work together.

- 60 minutes | work at your own pace
- For People Managers & Team Leads

What this hour is, and what it isn't

WHAT IT IS

YOU WILL LEAVE WITH

- » **A clear picture** of what changes for you when your team starts using AI.
- » **Shared language** that you can use to talk about it with your team.
- » **Four ideas you can try** in your own team.

WHAT IT ISN'T

This is not a course designed to make you an AI expert in 60 minutes. It is a simple introduction to help you get started.

There are no tests or grades. The self-checks are just a chance to pause and reflect on what you have learned.

Three things to know before you start

01 | PACE

Set aside about 60 minutes to complete the three sections. The suggested timings are only a guide, so move through the course at a pace that works for you.

02 | SELF-CHECKS

You will come across short self-checks along the way. Take a moment to choose your answer before moving on. They are not graded or shared with anyone.

By the end of this lesson, you'll be able to:

01 **Analyse** how AI shifts the nature of work.

02 **Apply** what managers need to do differently to lead an AI-enabled team.

Bring your team with you

Think about the team you lead. Who reports to you, and what does each person do in a normal week?

Keep that team in mind. You will use it in every part of this hour.

Picture 1: Four people doing different kinds of work, with one manager reviewing everything.

01

Why the work changes

What changes when your team starts using AI, and where the checking model starts to break down.

20 minutes

Every piece of work comes to you before it goes out

This is probably familiar. People do the work, managers check it, and there's just enough time to review everything before moving on.

Now, each person uses AI in their own work

No one has been replaced, and the team still reports to the same manager. The difference is that each person now has a tool helping with part of their work.

The team may look the same, but the work comes in faster and in greater volume.

Nobody was replaced. You are still managing the same team. So, what changes?

Five things change about the work...

1

Drafts come together faster

A first draft takes minutes instead of days

2

More work gets produced

More ideas, more versions, and more work to review.

3

People do work beyond their role

People now produce work outside their own speciality.

4

Good work can be harder to spot

Something can look polished and still be wrong.

5

The manager's question changes

Less of "Is it finished?" and more of "Is it right?"

The team produces more, but your review time remains the same

BEFORE

Work arrives at the pace you can keep up with.

What you can check

AFTER

Work arrives faster than you can review it.

What you can check

Each block is one piece of work waiting for you to review. The dashed line is your available time, and it doesn't change.

The hard part is not doing the work, but **deciding what matters**

The amount of work grows. Your hours and responsibilities don't.
But your **attention is now the resource that runs out first.**

AI creates the work. People decide what to do with it.

AI • THE PRODUCER

It produces the raw material.

- » Drafts, summaries, options and first-pass analysis
- » Patterns in more data than a person can read
- » Repeatable steps, done the same way each time

PEOPLE • THE DECIDER

They decide what matters, what's right, and what happens next.

- » Which option fits the audience, the situation and the moment
- » Where the work is wrong, risky, or not ours to send
- » How the audience will feel when they see the result

Being **the Decider** isn't automatic. Every time you review what AI produces, that's you drawing the line between raw material and a decision.

If AI can produce the work, where do **people** add value?

- » Think of the last piece of work you have sent back. What were you adding?
- » Which of your team's work would you never send without reading?

WHERE PEOPLE ADD THE MOST VALUE

People now do these kinds of work...

AREA 1

Making Decisions

Choosing between options that all look good, using context and judgement AI doesn't have.

AREA 2

Checking Errors and Risks

Identifying mistakes, bias, or inaccuracies before work is approved.

AREA 3

Building Relationships

Reading the situation and responding in a way that fits the person.

The next three screens show each area on a normal working day.

Two plans, both good, one week to run one

Anushia · Marketing Executive

She asks an AI tool for a product launch plan for next week's launch. It gives her two options in minutes. Both look complete. One starts with the price. The other starts with the customer's story.

AI DID

Wrote both plans, with structure and costs.

ANUSHIA DID

Remembered customers had seen discounts all year, and picked the story-led plan.

- » The skill was not the writing. It was knowing which plan these customers would respond to.

The tool made the same mistake every time

Hui Ming · Customer Support

A refund tool has been handling claims for weeks. Hui Ming notices a pattern: valid claims are being rejected whenever the receipt is uploaded as a photo instead of a PDF.

AI DID

Applied the same rule to every claim, quickly.

HUI MING DID

Saw the pattern, reported it, and had the rule and the refused claims fixed.

- » A tool does not remove the need to check. It turns one mistake into the same mistake many times.

The notes were right, but the meeting changed

Farah · Marketing Executive

Farah arrives with AI-prepared notes about the customer's growth plans. Two minutes in, the customer says they have stopped hiring. The prepared story no longer fits.

AI DID

Prepared a clear, well-researched pitch for the customer.

FARAH DID

Put the pitch aside, asked what the hiring freeze meant for their year, and changed the conversation to match.

- » A tool can prepare before the meeting. Only a person can respond to what the customer says in it.

Which kind of work is each of these?

» Read each scenario below. Then match it to the most appropriate option: A, B, or C.

OPTIONS

A • Making Decisions**B • Checking Errors and Risks****C • Building Relationships****1**

Your analyst's monthly report was mostly written by AI. Two numbers don't match last month's report, and no one has noticed.

2

Two campaign ideas, both written by AI, are within budget. Only one can run this quarter, and the team can't agree which one.

3

A long-time customer writes in, upset about a change they weren't told about. The AI-generated reply is accurate but cold.

Which kind of work is each of these?

» Read each scenario below. Then match it to the most appropriate option: A, B, or C.

OPTIONS

A • Making Decisions

B • Checking Errors and Risks

C • Building Relationships

1

Your analyst's monthly report was mostly written by AI. Two numbers don't match last month's report, and no one has noticed.

B • Checking Errors and Risks

The tool sounds confident, so the mistake goes unnoticed until a person checks it.

2

Two campaign ideas, both written by AI, are within budget. Only one can run this quarter, and the team can't agree which one.

A • Making Decisions

Both options could work. Choosing the better one requires context the tool doesn't have.

3

A long-time customer writes in, upset about a change they weren't told about. The AI-generated reply is accurate but cold.

C • Building Relationships

The reply is accurate, but the relationship needs care, not just the right answer.

» A scenario may seem to fit **more than one** option. When that happens, pick whichever one **matters most** for what happens next.

WHAT THIS DOES TO YOUR TEAM

Everyone on your team now manages the work

Making decisions, catching risks, building relationships: all three now run through AI.

That means everyone now does this too:

THEY NOW

Direct

Tell the tool what is needed,
with enough detail to be useful.

THEY NOW

Tune

Ask again and change the first
answer until it fits the job.

THEY NOW

Validate

Decide whether it is right, safe
and ready to send.

Direct, tune, validate: what used to be your work now becomes everyone's, whether or not they have been taught.

**If everyone on your team is directing,
tuning and validating, what is your work
now?**

02

How your role as a manager shifts

What changes for you once your team starts directing, tuning, and validating their own work, and where guiding that system becomes yours alone.

🕒 25 minutes

Four responsibilities take on a new shape

Your role hasn't become smaller. It has **shifted**. Here's where your **focus** belongs now.

01

Design human-AI work systems

Redesign how work is organised so people and AI work together effectively.

02

Lead teams through AI-driven change

Help your team navigate the ongoing shifts in how work gets done.

03

Develop employee judgement

Make sure people apply sound judgement when using AI, not just produce outputs.

04

Guide ethical AI usage

Set clear rules for how AI can and cannot be used.

Why does this matter, and what would you do about it?

01

Design human-AI work systems

02

Lead teams through AI-driven change

03

Develop employee judgement

04

Guide ethical AI usage

WHAT HAS SHIFTED WITH AI?

AI is increasingly capable of taking on parts of the work, and its capabilities keep evolving. Think about your own team, and jot down:

01 Why has this responsibility become more important? What has changed in how your team's work gets done?

02 What would you do? What's one concrete action you would take?

» *Note your answers before continuing. There isn't a single right answer. This is about your team, not a test.*

Why does this matter, and what would you do about it?

01

**Design human-AI
work systems**

02

**Lead teams through
AI-driven change**

03

**Develop employee
judgement**

04

**Guide ethical AI
usage**

HOW DOES IT SHIFT YOUR ROLE?

As AI takes on more of the work, there are ongoing opportunities to redesign how work gets done. Here's what you need to do:

- 01** Design how work flows between people and AI.
- 02** Define where AI supports the work and where people take the lead.
- 03** Review and adjust workflows as AI capabilities evolve.

» *Your answer doesn't need to match this exactly. Use the example to reflect on your own thinking.*

Why does this land on you, and how would you handle it?

01
Design human-AI
work systems

02
Lead teams through
AI-driven change

03
Develop employee
judgement

04
Guide ethical AI
usage

WHAT HAS SHIFTED WITH AI?

As AI continues to evolve, many teams are experiencing anxiety, resistance, or uncertainty about their roles and value. Reflect on your own team:

01 What has changed? How has AI affected the way your team works or how people feel about their roles?

02 What would you do? What is one concrete action you could take to help your team adapt?

» *Note your answers before continuing. There isn't a single right answer. This is about your team, not a test.*

Why does this land on you, and how would you handle it?

01
Design human-AI
work systems

02
Lead teams through
AI-driven change

03
Develop employee
judgement

04
Guide ethical AI
usage

HOW DOES IT SHIFT YOUR ROLE?

AI-driven change is now constant. Your role is not just to manage new tools and processes, but to lead your team through ongoing change. Here's how:

- 01** Acknowledge concerns and talk openly about AI.
- 02** Reinforce where your team's judgement, creativity, relationships, and context add value.
- 03** Create a culture where people can experiment, learn, and adapt as work evolves.

» *Your answer doesn't need to match this exactly. Use the example to reflect on your own thinking.*

Why is this needed now, and where would you start?

01
Design human-AI
work systems

02
Lead teams through
AI-driven change

03
Develop employee
judgement

04
Guide ethical AI
usage

WHAT HAS SHIFTED WITH AI?

AI can produce a lot of work quickly. Your team still has to decide what to ask, trust, and change. That makes their judgement more important than ever. Consider your own team:

01 Why does judgement matter more now? What decisions does your team need to make when working with AI?

02 What would you do? What is one concrete action you could take to strengthen their judgement?

» *Note your answers before continuing. There isn't a single right answer. This is about your team, not a test.*

Why is this needed now, and where would you start?

01
Design human-AI
work systems

02
Lead teams through
AI-driven change

03
Develop employee
judgement

04
Guide ethical AI
usage

HOW DOES IT SHIFT YOUR ROLE?

Good judgement now separates effective AI use from poor AI use. It needs to be developed and reviewed deliberately, not left to grow on its own. Here's what to put in place:

- 01** Set clear expectations for good judgement, and step in when someone relies on AI without question.
- 02** Coach your team to review AI outputs carefully and explain the decisions they make.
- 03** Recognise and reward sound decisions, not just fast or polished work.

» *Your answer doesn't need to match this exactly. Use the example to reflect on your own thinking.*

Why does this matter here, and what rule would you set?

01
Design human-AI
work systems

02
Lead teams through
AI-driven change

03
Develop employee
judgement

04
Guide ethical AI
usage

WHAT HAS SHIFTED WITH AI?

AI can introduce risks that aren't always obvious. If they're not caught early, they can spread quickly. Think about where these risks could surface in your team:

01 Where is your team most exposed to AI-related risk? What could go wrong, and why might it be missed?

02 What would you do? What is one concrete check, rule, or accountability measure you would put in place?

» *Note your answers before continuing. There isn't a single right answer. This is about your team, not a test.*

Why does this matter here, and what rule would you set?

01

Design human-AI
work systems

02

Lead teams through
AI-driven change

03

Develop employee
judgement

04

Guide ethical AI
usage

HOW DOES IT SHIFT YOUR ROLE?

With AI's risks often hard to spot and quick to spread, there is an ongoing need to build in checks and accountability that catch them early. Here's what you need to put in place:

- 01** Identify where bias or weaknesses could appear, and build in human checks.
- 02** Decide when to question, override, or stop an AI recommendation.
- 03** Make accountability clear, including who owns the decision and what happens when something goes wrong.

» *Your answer doesn't need to match this exactly. Use the example to reflect on your own thinking.*

AI creates. Your team decides. You shape the system.

AI • THE PRODUCER

It produces the raw material.

- » Drafts, summaries, options and first-pass analysis
- » Patterns in more data than a person can read
- » Repeatable steps, done the same way each time

PEOPLE • THE DECIDER

They decide what matters, what's right, and what happens next.

- » Which option fits the audience, the situation and the moment
- » Where the work is wrong, risky, or not ours to send
- » How the audience will feel when they see the result

YOU • THE ARCHITECT

You design and guide the system they work within.

- » The workflows people and AI move through
- » How your team adapts as the shift continues
- » The rules for what AI can and cannot be used for

**You understand why the work changed,
and where you add the most value. So,
what does it mean to lead an AI-enabled
team?**

Four steps for leading a team that uses AI

YOU ARE HERE

01

Set the team vision

Get clear on why AI matters for your team, and picture what a strong human-AI partnership looks like day to day.

02

Identify the current state

Look honestly at where your people, workflows, and tools stand today, before you try to change any of it.

03

Design human-AI operating model

Decide who's deciding, who's checking, and where the guardrails sit across people, process, and technology.

04

Develop an AI enablement plan

Pick a few pilots worth testing, tie each to your vision, and build the confidence to scale what works.

The order matters. Without a vision, you have nothing to compare your team against and no way to choose what to try.

You learned how to:

01 **Analyse** how AI shifts the nature of work.

02 **Apply** what managers need to do differently to lead an AI-enabled team.

If you want to go further than an introduction

AI for People Leaders

• 11 hours | Instructor-led

• Fully HRDC Claimable

WHAT YOU'LL WALK AWAY WITH

- » **Diagnose resistance** and **lead your team's AI adoption** with intent
- » **Redesign workflows** and **strengthen oversight** of human-AI work
- » Leave with an **actionable AI enablement blueprint** for your team

FOUR MODULES

- 01** **The Case for AI**
- 02** **Leading AI-enabled Teams**
- 03** **AI Enablement Blueprint**
- 04** **Change Management for AI Transformation**
